

Ballast-Free UV Lamps

NEW! Economical, enhanced 400w UV energy source (365nm peak) suitable for most applications where a UV spectral output is required!

BT37

CON-TROL-CURE® Ballast-Free UV Lamps are enhanced mercury vapor UV light sources that deliver increased, highly efficient UV light output. This new design provides more UV light for better curing of UV reactive materials.

Powered by 110v, Ballast-Free UV Lamps eliminate the bulk and cost of the high voltage power supply required to power most UV light sources. As a result, these patent-pending lamps can dramatically lower your operating and manufacturing costs. Each lamp screws directly into a Mogul-type light socket.

User-friendly and available in a variety of shapes and sizes, these lamps can be used for nearly any application where a UV energy source is required. Small and lightweight, they can be used for inaccessible installations. Use alone for laboratory applications or group a number of lamps in unique configurations to suit individual production applications. Long lamp life delivers dependable performance day after day.

There are few limitations on how and where Ballast-Free UV Lamps can enhance your UV curing applications.

R57

Features & Specifications:

- Lamp Types: BT37; R57 (includes parabolic aluminized reflector)
- Energy Output: 400 watts
- Output: BT37: 50 mW (365nm peak)
R57: 550 mW (365nm peak)
- Power Requirement: 110v (no high voltage required)
- Small & Lightweight: Ideal for inaccessible installations
- Economical: Lowers operating and manufacturing costs
- Portable: Excellent for inaccessible installations
- Weight: BT37: 10 oz.; R57: 13 oz.
- Long lamp life

Options:

- Mogul Screw Socket
- Medium Screw Socket
- Medium-to-Mogul Screw Adapter
