CONTACT™ WIPER CLOTH

Utilizing a revolutionary new adhesive system, **CONTACT™ Wiper Cloth** is a high strength tack cloth with near-tackless feel. The fabric's very light, precision-coated tack and apertured structure give this product excellent pick-up power for cleaning in one swipe. Capable of holding tremendous amounts of particulate matter with very light pressure, CONTACT™, even under significant pressure, will not transfer adhesive to the surface being wiped.

This makes CONTACT™ a perfect wiper for cleaning film and for other applications where tack transfer is a problem. Now users can worry less about wiping technique, worry less about tack transfer, and pay more attention to the surface being wiped. Sold 100-10x18" per box.

Features:

- Remarkable tackless feel offers equally exceptional pick-up
- Removes lint without leaving residue; perfect for plates/film
- One-swipe wiping effectively grabs particulate from most surfaces for fast clean-up
- Revolutionary new adhesive system eliminates tack transfer

Item No.: J006-014
Description: CONTACT™ WIPER CLOTH; 10x18" sheet
Price: \$45.00/100

Why Contact™ Wiper Cloth?

Removing dirt particles from surfaces can be a difficult task. Static electricity and frictional forces make particles adhere to surfaces with surprising strength. Solvent wiping is one potential solution to this problem. In some situations this is not practical. Another excellent solution to this problem is to use tack cloth.

Tack cloth wipers are fabric wipers which have been treated with resins which pick-up and hold

particulate matter. Tack cloth is an effective wiping tool because it is safe, effective, convenient, and easy to use.

The problem with traditional tack cloth is that the resin the tack is easily transferred to the surface being wiped. This transferred tack has the potential to interfere with further processing.

CONTACT™ Wiper Cloth eliminates this problem.
