

SAF-T-CURE UV Safety Starter Kit

Beginner package includes “Best for UV” skin protection and cleaning products for personnel working with UV inks, coatings or adhesives

SAF-T-CURE™ products help protect your company's most valuable assets: you and your employees. For shops new to UV curing, UV Process Supply offers this **Safety Starter Sampler Kit** to give you the opportunity to test some of our most popular skin protection products.

The Kit includes the following:

SAF-T-CURE® UV HAND CLEANER (1 Pint)

Specially formulated to remove UV curable inks, coatings and adhesives from the skin. It contains a monomer neutralizing agent that counteracts irritation while softening and protecting the skin. Used without water, UV Hand Cleaner eliminates the need for extra or special clean-up facilities throughout the shop.

UV Hand Cleaner removes UV inks, coatings and adhesives while protecting the skin from damage.

SAF-T-CURE® UV BARRIER CREAM (1 Pint)

Forms a physical barrier to most water insoluble irritants. The skin becomes sensitized from repeated contact with UV materials, even after apparent trouble-free periods of exposure. Barrier Cream should be applied to clean skin PRIOR to chemical contact. It does not interfere with manual dexterity. UV Barrier Cream is buffered to the average pH of the skin's acid mantle and washes off with mild soap and water. It prevents build-up around fingernails, knuckles and other areas where materials concentrate, and is most effective when used with gloves.

UV Barrier Cream protects the skin against the penetration of UV materials.

SAF-T-CURE® UV SKIN LOTION (8 oz.)

This lotion completes the skin protection cycle by replenishing lost oils and preventing dermatitis, cracking and drying due to frequent washing and drying. It contains a special additive to counteract irritation caused by most UV materials.

UV Skin Lotion prevents skin drying due to frequent washing.

SAF-T-CURE™ NT SURGICAL-TYPE* GLOVES (100 X-Lg Gloves)

Durable, 4 mil thick gloves are designed to offer hand protection in many light-use industrial applications. Their unique, pressure-reducing quality provides form fitting comfort at 100% stretch for added manual dexterity, working ease, and excellent hand protection. These anti-static gloves are ideal for use in electronics printing and assembly, pre-press processes, and when handling and mixing UV inks, coatings and chemical solvents.

“Best for UV” NT Surgical Type Gloves provide full dexterity and protection against UV materials.

Note: Our description "Surgical-Type" does not suggest or imply that these gloves meet FDA requirements for a full surgical glove, but refers only to the style in relationship to thickness and dexterity of use.
